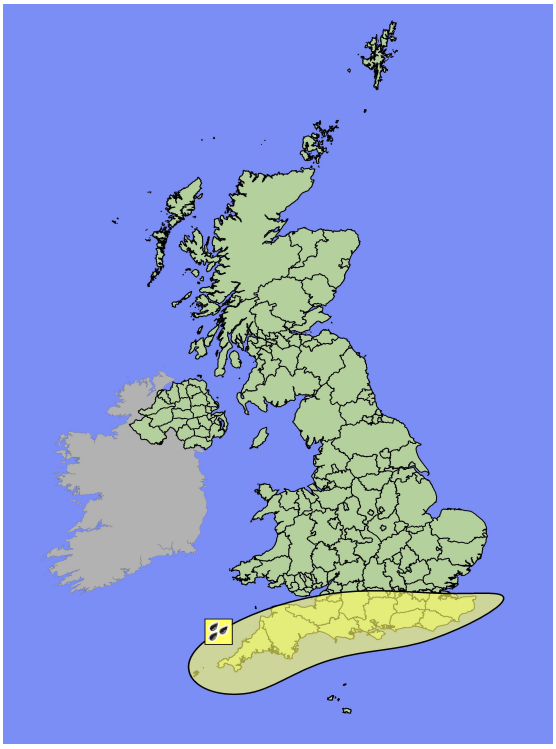
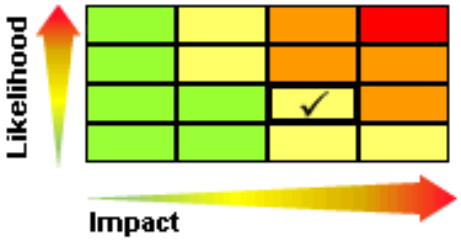
National Severe Weather Warning Service





Chief Forecasters Assessment
A weather system moving northeastwards across France and southern Britain, brings with it the risk of torrential downpours, and perhaps some longer periods of heavy, thundery rain. As is usual in such situations, the heaviest rainfall will tend to be localised but where it does occur it may produce 30 to 50 mm within just a few hours. Isolated totals of more than 80 mm are possible locally.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **18:00 on Mon, 22nd Aug 2011** until **23:59 on Mon, 22nd Aug 2011**

Outbreaks of heavy, thundery rain are likely to spread into southern counties of England on Monday evening and continue northeast across parts of England and Wales on Tuesday. The public should be aware that local flooding is possible.
